LAND CLAIMS ENQUIRY

- **Farm 622, within the Namaqualand Magisterial District in the Northern Cape Province**

We refer to your letter received: **05 December 2024.**

We confirm that as at the date of this letter that no land claim appears on our database in respect of the Properties this includes the database for claims lodged by 31 December 1998; and those lodged between 1 July 2014 and 27 July 2016 in terms of the Restitution of Land Rights Amendment Act, 2014.

Whilst the Commission takes reasonable care to ensure the accuracy of the information it provides, there are various factors that are beyond the Commission's control, particularly relating to claims that have lodged but not yet been gazetted such as:

- Some Claimants referred to properties they claim dispossession of rights in land against using historical property descriptions which may not match the current property description; and
- Some Claimants provided the geographic descriptions of the land they claim without mentioning the particular actual property description they claim dispossession of rights in land against.

The Commission therefore does not accept any liability whatsoever if through the process of further investigation of claims it is found that there is in fact a land claim in respect of the above property.

If you are aware of any change in the description of the above property after 19 June 1913 kindly supply us with such description so as to enable us to do a further search.

Yours faithfully

**PROOF OF AFRIKAANS AND ENGLISH ADVERTS
PLACED IN THE GEMSBOK NEWSPAPER ON 06
DECEMBER 2024**

Besoedeling van Upington-besproeiingskanaal by Groen Skerpioene aangemeld

GEMSBOK-UPINGTON: Flip Van Der Steen, 'n Dawid Kruiper Munisipaliteit raadslid, het gesê Dawid Kruiper-munisipaliteit is onlangs by die Groen Skerpioene aangemeld, omdat die munisipaliteit versuim het om te keer dat riool in die dorp se besproeiingskanaal, vir langer as drie weke, stort.

Opgehoopte riool, wat uit die groter dorpsgebied kom, besoedel die kanaal in die omgewing van die munisipaliteit se elektriese eenheid in Cohenweg.

Van daar af loop die kanaal deur die dorp, verby die Oasis-oord, deur Lemoendraai en dan met die Keimoespad tot by Mctaggartskamp.

Die kanaal word gebruik vir die besproeiing van dorpstuine en ook deur opkomende boere vir wingerde, lusern asook skape en beeste.

Gemeenskappe in gebiede soos Ses Brugge, Klippunt en Kalksloot maak ook van die kanaalwater gebruik vir huishoudelike doeleindes.

Die situasie hou 'n ernstige gesondheidsrisiko in vir die gemeenskap rondom die kanaal, veral vir mense en diere wat die water gebruik en die produkte verbruik wat daarmee besproei word.

Die situasie hou ook 'n ekonomiese risiko in vir die kleinboere, wie se lewensbestaan bedreig word deur die gevolglike watergehalte kwessies.

Riool in die kanaalwater veroorsaak ook 'n al-

gegroeï, wat deur hoë temperature vererger word. Dit maak kanaalonderhoud al hoe moeiliker vir die Upington Besproeiingsraad.

"Ek het die rioolstorting drie weke gelede by die Munisipale Bestuurder en die Direkteur van Siviele Dienste aangemeld. Die munisipaliteit het verlede week die terrein ondersoek, maar daar bly geen gevoel van dringendheid om die rioollekkasie te stop nie," vertel Van der Steen in 'n sosiale media video (te sien op Gembok se Facebookblad).

Nou is daar ook 'n skriftelike klag by die LUR van Omgewing, Mase Manopole, en die Groen Skerpioene ingedien vir hul dringende aandag.

"Gegewe die afhanklikheid van baie gemeenskappe op kanaalwater, veral te midde van voortdurende waterbeperkings wat in Upington ingestel word, kan die situasie nie gelaat word om in 'n groter gesondheids- en waterkrisis te ontwikkel nie," sê Van der Steen.

Opgehoopte riool, wat uit die groter dorpsgebied kom, besoedel die kanaal in die omgewing van die munisipaliteit se elektriese eenheid in Cohenweg.

Die skoolvakansie is net om die draai en of jy nou met Jan Tuisbly se karretjie ry of met vakansie gaan, veiligheid by die huis, op vakansie of op die plaas moet veral in dié tyd opgeskerp word. AfriForum se gemeenskapsveiligheidsafdeling se lys handige wenke bied advies oor hoe om jou en jou geliefdes hierdie feesseisoen optimaal te beveilig.

As jy tuis is: Let op na hoe jou of die bure se honde blaf. Dit is dikwels 'n aanduiding van gevaar of 'n bedreiging.

Bly op datum met die beurtkragskedule in jou omgewing. Kragonderbrekings maak die huis 'n sagter teiken waartoe kriminele makliker toegang kan kry.

Vind uit wanneer jou bure met vakansie gaan. Bekom die nodige telefoonnummers wat gebruik kan word indien 'n noodgeval sou opduik.

Sluit aan by die buurtwag, ry patrollies en

neem kennis van informasie wat ingewin word.

As jy met vakansie gaan:

Laat weet jou bure wanneer jy vertrek en wanneer jy gaan terugkom.

Moenie dat pos en koerante in die posbus ophoop nie. Kriminele kan hieruit aflei dat niemand by die huis is nie. Stel iemand aan om hierna om te sien en indien moontlik na jou huis te kyk. Stel die persoon aan jou bure voor. Hierdie persoon moet ook die nodige kontaknummers van mense hê wat tydens 'n noodgeval gekontak moet word.

Indien jy jou veiligheidsmaatskappy vertrou, laat weet hulle van jou reisplanne. Doen dieselfde vir jou buurtwagleier.

Wanneer jy die langpad aandurf, maak seker jou voertuig is padwaardig. Beplan jou roete voor jy die pad aanpak en pak 'n noodhulpkissie in en maak sodoende voorsiening vir mediese noodgevalle.

Good day,

Thank you for your email and for participating in the public consultation process for the Draft Basic Assessment Report (DBAR) and Environmental Management Programme (EMPR).

We acknowledge your request for consultation regarding the PR applications and appreciate the issues you've highlighted.

Compliance with the CPA Amendment Act:

We will ensure that all requirements under the Communal Property Associations Amendment Act, 2018 (Act No. 20 of 2018) are adhered to, particularly regarding land held under a CPA.

Ownership of Land Under TRANCRAA:

Your reference to Section 3(13) of the Transformation of Certain Rural Areas Act (Act No. 94 of 1998) is noted. We will confirm ownership details and ensure that the Department of Agriculture, Land Reform, and Rural Development (DALRRD) is consulted where necessary, especially in cases where the land is still reflecting a community name.

Should you require additional details or wish to discuss this further, please do not hesitate to contact us.

Good day

Eskom Distribution has evaluated your project and we can confirm that our Nama/Doringwater 1 66kV line and our Nama/Concordia 1 22kV Overhead Line will be affected by this project, the mining activities must be at least 15.5m away from our servitude to avoid electrocution, blasting must be at least 500m away from the line.

Dear Greenmined Colleagues

RE: COMMENTS ON THE DRAFT BASIC ASSESSMENTS FOR THE PROPOSED PROSPECTING RIGHT APPLICATION FOR SOLIUM ENERGY (PTY) LTD.

INTRODUCTION

Solium Energy (Pty) Ltd submitted three (3) Basic Assessment Applications for prospecting rights on Farm No. 622 (Concordia), located within the Namakwa District Municipality. Greenmined Environmental (Pty) Ltd was commissioned to conduct the Environmental Impact Assessment Process on behalf of Solium Energy. The proposed prospecting footprint applied for is 83 954 ha on farm No. 622 for Uranium Ore and will make use of non-invasive and invasive prospecting activities that will include borehole drilling to retrieve geological core samples.

The proposed developments are located within the following environmental features as illustrated on the maps.

- Critical Biodiversity Areas Features of CBA 1,2 and Ecological Support Areas in terms of the Northern Cape Critical Biodiversity Area Map (2016).
- Mucina and Rutherford Vegetation of South Africa: Namaqualand Klipkoppe Shrubland; Namaqualand Blomveld.
- National Freshwater Ecosystem Priority Rivers
- National Protected Area Expansion Priority Areas (NPAES) 2016.

Comments

1. Landscape connectivity is vital for the persistence of ecosystems. The National Protected Area Expansion Priority Areas are considered important sites for biodiversity conservation to meet conservation targets, and global or national biodiversity commitments. Approximately 75% (52 297 ha) of the proposed prospecting area falls within the Priority Focus Area of the NPAES.

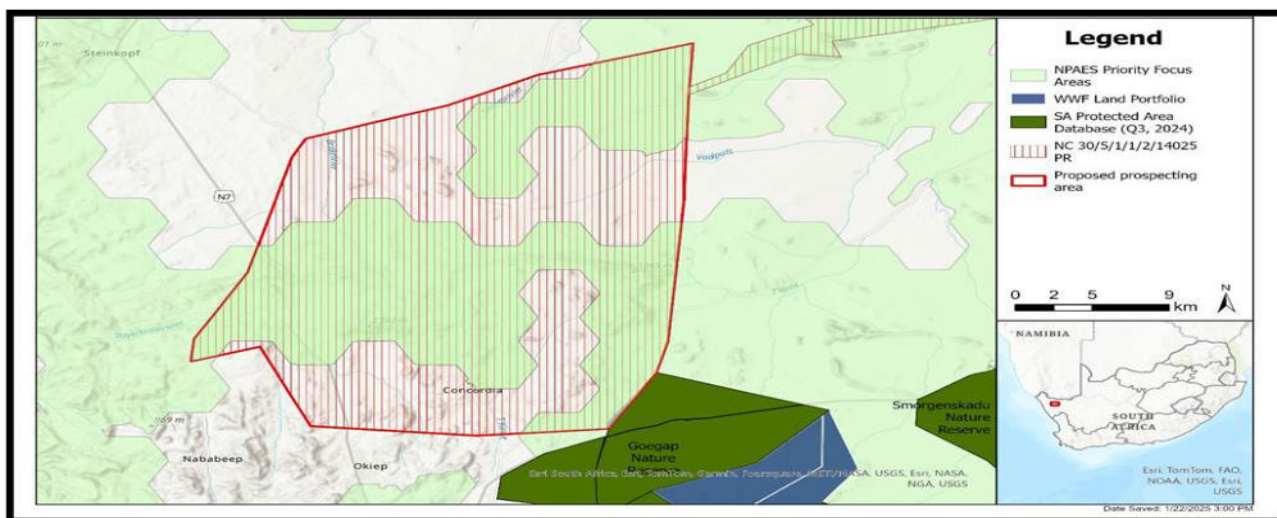

Figure 1: NPAES Priority Focus Area

- In addition, approximately 72% of the proposed prospecting area is categorised as irreplaceable CBAs and 18% as highly important ESAs. These areas are essential to meet biodiversity targets for ecosystems, species and ecological processes, with CBAs considered as “no-go” areas for any development.

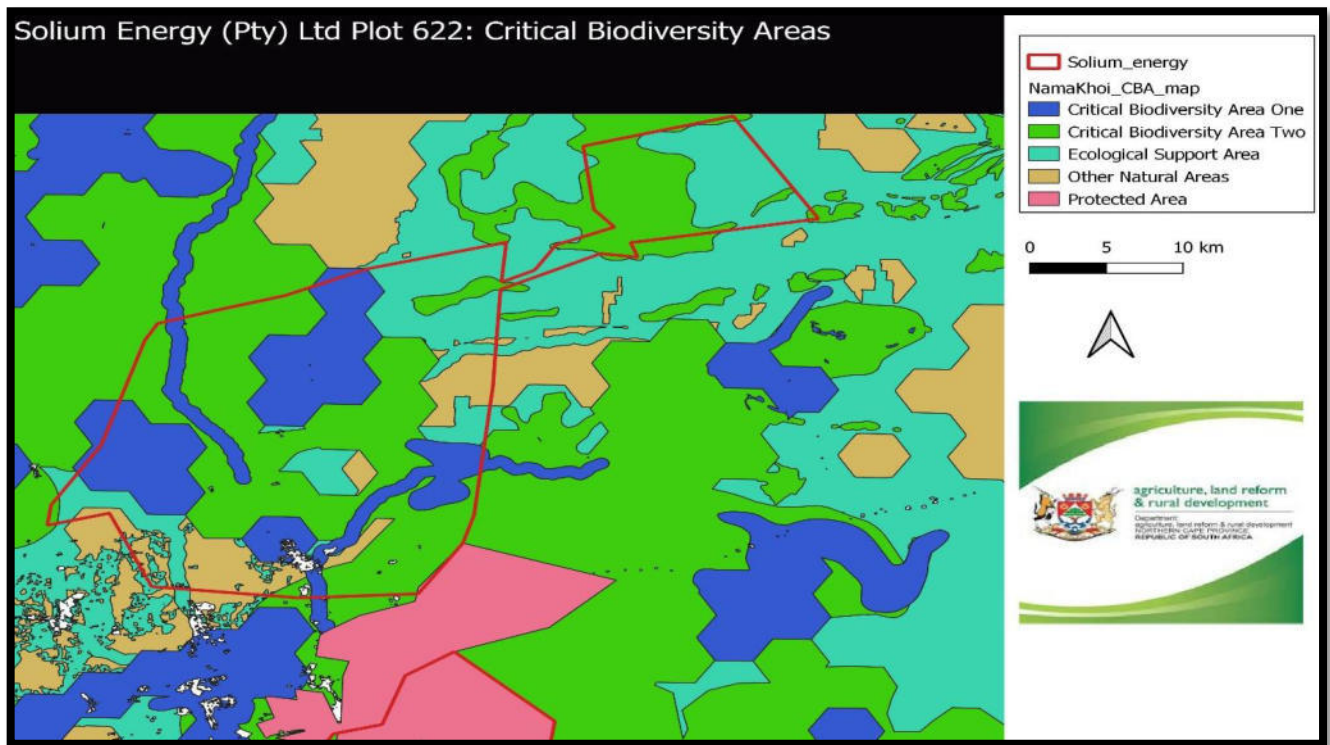

Figure 2: Northern Cape Critical Biodiversity Areas

- Namaqualand Klipkoppe Shrubland, Namaqualand Blomveld, Bushmanland Arid Grassland and Bushmanland Inslegberg Shrubland are characterised by the presence of *Aliodendron dichotomum* (formerly known as *Aloe dichotoma* var. *dichotma*). It is currently listed as vulnerable (VU) and climate change models project a 36% decline in the species range within 100 years, assuming dispersal into newly suitable areas. In addition, there is a moratorium in place in the Northern Cape on the removal of *A. dichotomum* from the wild due to historic trade-related pressures on populations (Proclamation No. 968, 1 April 2005). All *A. dichotomum* individuals within close proximity to the planned development must be mapped in all documents going forward and regarded as no-go areas. Please also note that *Boschia albitrunca* (Shepherd’s tree) is protected under the National Forest Act (Act No. 84 of 1998) and the Northern Cape Nature Conservation Act (Act No. 9 of 2009). If this species is noted in high abundance within the study area it must be indicated as such.
- The Bushmanland Inselberg Shrubland are important refugia for plants and animals and act as corridors for rocky habitat species migrating across the sands covered plain plains of the Bushmanland Sandy Grassland ecosystem. Based on their higher biodiversity and contribution to local habitat diversity, the rocky outcrops must be avoided by the development. This does not imply that plains habitats are of little ecological concern.

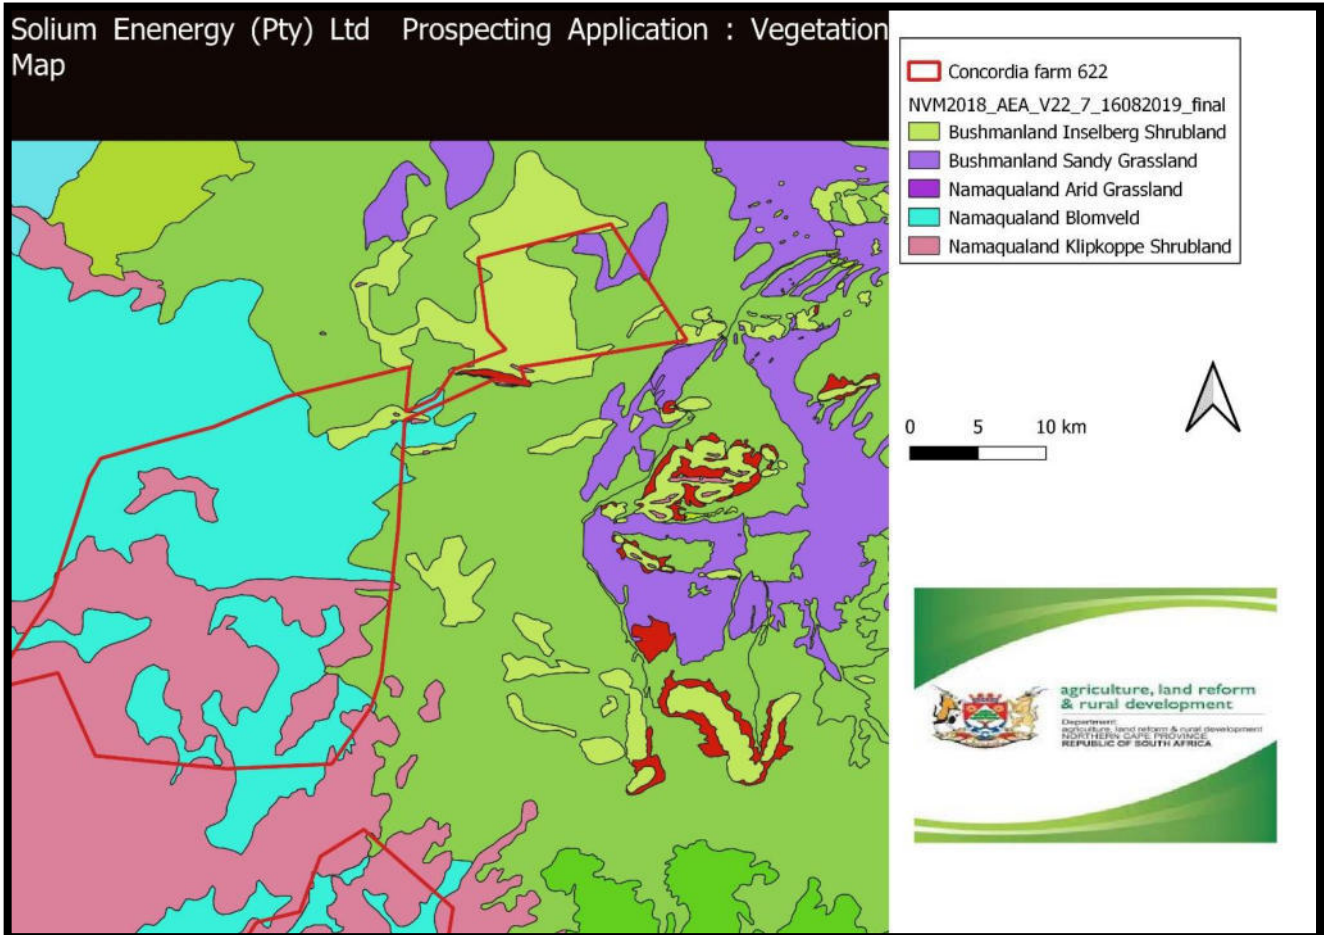

Figure 3: Solium Energy (Pty) Ltd in relation to Mucina and Rutherford Vegetation Map

5. Approximately 72% of the proposed prospecting area is categorized as irreplaceable CBA's and 18 % as highly important Ecological Support Areas. These areas are essential to meet biodiversity targets for ecosystems, species and ecological processes, with CBA 1 considered as “no-go” areas for developments. Activities which may cause fragmentation of CBAs leading to loss of ecological connectivity are not supported. Specialist assessment(s) must be undertaken if any of the above-mentioned circumstance prevail or if there is any doubt about the biodiversity value of the potentially impacted areas. The opportunities and constraints of the receiving environments must be used to inform the desirability and layout of any development proposal to ensure that developments do not compromise the biodiversity value of the area. When assessing the impact of the development on CBAs, the EAP must investigate the reasons (features) behind determination of the CBAs and critically assess whether these will be impacted negatively by the proposed construction and operational phase activities.

6. Considering the landscape connectivity in terms water provisions and ecosystem services, the cumulative impacts of mining in the region is a concern. Cumulative impacts in relation to an activity are defined in the

EIA Regulations (Government Notice R543) as meaning “*the impact of an activity that itself may not be significant, but may have become significant when added to the existing and potential impacts eventuating from similar or diverse activities or undertaking in the area*” Considering the competing land uses on farm 622, which include mining and prospecting right applications, livestock farming and renewable energy developments, cumulative impacts must be assessed within the context of landscape connectivity.

7. The screening report indicated important habitats for several species of conservation concern. DAERL does not support activities that may negatively impact on habitats and ecological functioning. Appropriate buffers must be determined by a suitable qualified specialist to avoid impacting on habitats and particular attention must be paid to avoiding the loss of intact habitat, maximizing habitat heterogeneity and reducing fragmentation at a local and regional scale. The buffers must guide the development plans to reduce any present and future impact on habitats. Once suitable buffers have been mapped it must be illustrated on a map and included in the application.
8. Water is a limited resource in the Namaqualand region. Water requirements for proposed activities and potential impact on broader surface and ground water resources must be rigorously assessed and considered by an aquatic/freshwater specialist and/or ground water specialist, including the cumulative impact if other developments are also taking place.
9. Rehabilitation of any disturbed ecosystem is only considered successful when the ecosystem has returned to an ecologically functional state and has similar species assemblage as its natural state. Such applications must have a complete rehabilitation plan appended to submitted documentation. It should also be noted that DAERL will not support new prospecting applications on property where previously mined or prospecting areas have been suitably rehabilitated to an ecologically functioning state and have been officially closed by the DMRE.

COMMENT ON BASIC ASSESSMENT REPORT IN TERMS OF PROCEDURAL REQUIREMENTS OF THE EIA REGULATIONS (GNR 982)

10. Biodiversity specialists must:
 - a. Be competent at interpreting and evaluating information and able to explain the direct and indirect consequences of an activity to biodiversity. Sub-regulation 16 (1) (b) (v) requires an environmental screening report to be generated through the web based environmental screening tool. A summary of the specialist assessments required in terms of the environmental screening tool must be provided with a copy of the screening report made available. According to the content of Table 30, specialist studies

were not conducted “*due to the minimal and temporary nature of the proposed prospecting activities*” despite several of the themes being listed as having **High and Very High sensitivity scores** specifically linked to the anticipated prospecting activities. DAERL thus strongly object to the EAPs conclusion that specialist assessments are not required and respectfully request the site sensitivity verification report required in terms of the environmental themes protocol with a copy of the Department of Minerals and Energy’s (DMRE) written approval thereof.

- b. Have appropriate formal training in her/his field of expertise. Have sufficient practical experience working in the specific ecosystems of the affected region and thereby adding value to the planning and design of the proposed project/activity. The available information does not demonstrate the EAP to possess the relevant experience or specialisations required for semi-arid, sensitive and biodiverse systems like the Succulent Karoo Biome, to be able to make this type of broad, unqualified statement.
- c. Be able to trace impact pathways and identify indirect or cumulative impacts and consider ecosystem good and services.
- d. Have good knowledge of relating to assessment techniques and to relevant legislation, policies and guidelines.
- e. Be registered with the South African Council for Natural Scientific Professions (SACNASP)

Please note that the DMRE no longer sends copies of the applications to commenting authorities. It is now the responsibility of the consultant working for the applicant to ensure that all commenting authorities receive the relevant documents.

Based on the above- mentioned information it is understood that prospecting application is for non-invasive prospecting. It is understood that the entire prospecting activity on site will comprise traversing the farm on foot and collecting rock samples for analysis. It is understood that this method will have a negligible impact on biodiversity. DAERL object to the prospecting application considering that prospecting applications ultimately lead to mining applications, and considering the proposed prospecting area targets an area that has bearing on land uses and has been identified as an area for livestock farming and contain important biodiversity features such as CBA`s and water courses. Although we understand that the impacts of prospecting are usually less than that of a mining, prospecting often leads often leads to mining and we do not support mining activities in the prospecting application area, as the environmental damage to ecologically pattern and processes is often irreplaceable, as the receiving environment is unlikely to be rehabilitated to its ecological state prior to mining.

Attention: Mr Peter Cloete, pcloete@daerl.co.za
Mr Abe Abrahams aabrahams@daerl.co.za

Dear Sirs

RE: ACKNOWLEDGMENT OF COMMENTS ON THE DRAFT BASIC ASSESSMENT REPORT FOR PROSPECTING ACTIVITY ON FARM 622 IN THE MAGISTERIAL DISTRICT OF NAMAQUALAND, NORTHERN CAPE PROVINCE (DMRE REF: NC 30/5/1/1/2/14025 PR).

We acknowledge receipt of your correspondence dated 30 January 2025, containing comments regarding the Draft Basic Assessment Report (BAR) for the proposed prospecting project. We greatly appreciate your participation in the Public Participation Process (PPP) and your detailed feedback.

Below, we address each point raised.

1. In addition, approximately 72% of the proposed prospecting area is categorised as irreplaceable CBAs and 18% as highly important ESAs. These areas are essential to meet biodiversity targets for ecosystems, species and ecological processes, with CBAs considered as “no-go” areas for any development.
 - The DBAR acknowledges the ecological importance of the area, including its inclusion in the Priority Focus Area of the NPAES. As detailed on Page 82, the report explicitly outlines that prospecting

the goal isn't to live forever, it is to protect a planet that will

activities are designed to minimize landscape disruption. The small footprint of less than 0.3 hectares for invasive activities (refer to Page 24) ensures that the ecological connectivity of the area remains intact. Additionally, specialist walk-throughs (see Page 86) will identify and avoid sensitive areas.

2. Namaqualand Klipkoppe Shrubland, Namaqualand Blomveld, Bushmanland Arid Grassland and Bushmanland Inslegberg Shrubland are characterised by the presence of *Aliodendron dichotomum* (formerly known as *Aloe dichotoma var. dichotoma*). It is currently listed as vulnerable (VU) and climate change models project a 36% decline in the species range within 100 years, assuming dispersal into newly suitable areas. In addition, there is a moratorium in place in the Northern Cape on the removal of *A. dichotomum* from the wild due to historic trade-related pressures on populations (Proclamation No. 968, 1 April 2005). All *A. dichotomum* individuals within close proximity to the planned development must be mapped in all documents going forward and regarded as no-go areas. Please also note that *Boschia albitrunca* (Shepherd's tree) is protected under the National Forest Act (Act No. 84 of 1998) and the Northern Cape Nature Conservation Act (Act No. 9 of 2009). If this species is noted in high abundance within the study area it must be indicated as such.
 - The DBAR identifies that 72% of the prospecting area is categorized as irreplaceable CBAs and 18% as ESAs. As outlined on Page 86, the prospecting activities will carefully avoid sensitive areas, and specialists will conduct walk-throughs before invasive activities to ensure that CBAs and ESAs remain undisturbed. The use of flexible site planning (refer to Page 24) further emphasizes the commitment to reducing impacts.
3. The Bushmanland Inselberg Shrubland are important refugia for plants and animals and act as corridors for rocky habitat species migrating across the sands covered plain plains of the Bushmanland Sandy Grassland ecosystem. Based on their higher biodiversity and contribution to local habitat diversity, the rocky outcrops must be avoided by the development. This does not imply that plains habitats are of little ecological concern.
 - The DBAR recognizes the presence of vulnerable species, including *A. dichotomum* and *B. albitrunca*. On Page 86, it is highlighted that walk-through assessments will map sensitive species, designating them as no-go zones. The project adheres to the requirements of the Northern Cape Nature Conservation Act and the National Forest Act, as mentioned under mitigation measures on Page 86 and in the EMPR (see Page 160).
4. Approximately 72% of the proposed prospecting area is categorized as irreplaceable CBA's and 18 % as highly important Ecological Support Areas. These areas are essential to meet biodiversity targets for ecosystems, species and ecological processes, with CBA 1 considered as "no-go" areas for developments. Activities which may cause fragmentation of CBAs leading to loss of ecological connectivity are not supported. Specialist assessment(s) must be undertaken if any of the above-mentioned circumstance prevail or if there is any doubt about the biodiversity value of the potentially impacted areas. The opportunities and constraints of the receiving environments must be used to inform the desirability and layout

of any development proposal to ensure that developments do not compromise the biodiversity value of the area. When assessing the impact of the development on CBAs, the EAP must investigate the reasons (features) behind determination of the CBAs and critically assess whether these will be impacted negatively by the proposed construction and operational phase activities.

- The DBAR concurs with the importance of these areas as biodiversity refugia. As detailed on Page 64, rocky outcrops will be avoided, and flexible drilling locations will be utilized to ensure minimal disruption. This approach is reinforced on Page 86, which emphasizes that specialist walk-throughs will guide the selection of non-sensitive sites for drilling.
 - Specialist assessments will investigate ecological features of CBAs to inform site planning. As described on Page 86, sensitive areas will be excluded from prospecting activities, and project layouts will be refined to ensure connectivity remains intact. The report further commits to using a minimal footprint for all prospecting activities (see Page 24).
5. Considering the landscape connectivity in terms water provisions and ecosystem services, the cumulative impacts of mining in the region is a concern. Cumulative impacts in relation to an activity are defined in the EIA Regulations (Government Notice R543) as meaning “the impact of an activity that itself may not be significant, but may have become significant when added to the existing and potential impacts eventuating from similar or diverse activities or undertaking in the area” Considering the competing land uses on farm 622, which include mining and prospecting right applications, livestock farming and renewable energy developments, cumulative impacts must be assess within the context of landscape connectivity.
- Cumulative impacts are addressed in the DBAR on Page 98, where the report commits to assessing and mitigating these impacts in consultation with specialists. Given the limited scale of the prospecting activities, the overall contribution to cumulative impacts is expected to be negligible. Nonetheless, measures outlined in the EMPR (see Page 160) ensure ongoing monitoring and mitigation.
6. The screening report indicated important habitats for several species of conservation concern. DAERL does not support activities that may negatively impact on habitats and ecological functioning. Appropriate buffers must be determined by a suitable qualified specialist to avoid impacting on habitats and particular attention must be paid to avoiding the loss of intact habitat, maximizing habitat heterogeneity and reducing fragmentation at a local and regional scale. The buffers must guide the development plans to reduce any present and future impact on habitats. Once suitable buffers have been mapped it must be illustrated on a map and included in the application.
- The DBAR commits to determining appropriate buffers to protect habitats, as detailed on Page 86. Once invasive activities are planned, specialists will identify and map sensitive areas, ensuring that these are excluded from the prospecting footprint. These buffers will be included in the final project layout (see Page 86).

7. Water is a limited resource in the Namaqualand region. Water requirements for proposed activities and potential impact on broader surface and ground water resources must be rigorously assessed and considered by an aquatic/freshwater specialist and/or ground water specialist, including the cumulative impact if other developments are also taking place.
 - Water use requirements and potential impacts are discussed on Page 24. The DBAR specifies that water will be sourced sustainably and used minimally for dust suppression and drilling. Specialists will assess potential impacts on surface and groundwater, and cumulative impacts will be rigorously considered (see Page 98)
8. Rehabilitation of any disturbed ecosystem is only considered successful when the ecosystem has returned to an ecologically functional state and has similar species assemblage as its natural state. Such applications must have a complete rehabilitation plan appended to submitted documentation. It should also be noted that DAERL will not support new prospecting applications on property where previously mined or prospecting areas have been suitable rehabilitated to an ecologically functioning state and have been officially closed by the DMRE.
 - The DBAR includes a comprehensive rehabilitation plan, as outlined on Pages 174-180. This plan ensures that disturbed ecosystems are restored to an ecologically functional state. The report commits to progressive rehabilitation and final closure according to DMRE standards, with specific measures detailed in the EMPR (see Page 160).

COMMENT ON BASIC ASSESSMENT REPORT IN TERMS OF PROCEDURAL REQUIREMENTS OF THE EIA REGULATIONS (GNR 982)

9. Biodiversity specialists must:
 - a. Be competent at interpreting and evaluating information and able to explain the direct and indirect consequences of an activity to biodiversity. Sub-regulation 16 (1) (b) (v) requires an environmental screening report to be generated through the web based environmental screening tool. A summary of the specialist assessments required in terms of the environmental screening tool must be provided with a copy of the screening report made available. According to the content of Table 30, specialist studies were not conducted “due to the minimal and temporary nature of the proposed prospecting activities” despite several of the themes being listed as having High and Very High sensitivity scores specifically linked to the anticipated prospecting activities. DAERL thus strongly objects to the EAPs conclusion that specialist assessments are not required and respectfully request the site sensitivity verification report required in terms of the environmental themes protocol with a copy of the Department of Minerals and Energy’s (DMRE) written approval thereof.
 - b. Have appropriate formal training in her/his field of expertise. Have sufficient practical experience working in the specific ecosystems of the affected region and thereby adding value to the planning and

- design of the proposed project/activity. The available information does not demonstrate the EAP to possess the relevant experience or specialisations required for semi-arid, sensitive and biodiverse systems like the Succulent Karoo Biome, to be able to make this type of broad, unqualified statement.
- c. Be able to trace impact pathways and identify indirect or cumulative impacts and consider ecosystem good and services.
 - d. Have good knowledge of relating to assessment techniques and to relevant legislation, policies and guidelines.
 - e. Be registered with the South African Council for Natural Scientific Professions (SACNASP)

- The DBAR includes an environmental screening report in Appendix L and commits to conducting required specialist studies for high-sensitivity themes. The decision to defer some studies is based on the minimal impact of initial non-invasive activities. All specialists will be registered with SACNASP, ensuring compliance with professional standards (see Page 24).

Please note that the DMRE no longer sends copies of the applications to commenting authorities. It is now the responsibility of the consultant working for the applicant to ensure that all commenting authorities receive the relevant documents.

- Noted

Based on the above- mentioned information it is understood that prospecting application is for non-invasive prospecting. It is understood that the entire prospecting activity on site will comprise traversing the farm on foot and collecting rock samples for analysis. It is understood that this method will have a negligible impact on biodiversity. DAERL object to the prospecting application considering that prospecting applications ultimately lead to mining applications, and considering the proposed prospecting area targets an area that has bearing on land uses and has been identified as an area for livestock farming and contain important biodiversity features such as CBA's and water courses. Although we understand that the impacts of prospecting are usually less than that of a mining, prospecting often leads often leads to mining and we do not support mining activities in the prospecting application area, as the environmental damage to ecologically pattern and processes is often irreplaceable, as the receiving environment is unlikely to be rehabilitated to its ecological state prior to mining.

- The DBAR reiterates that the application pertains to non-invasive prospecting activities only, designed to determine feasibility without guaranteeing mining. As noted on **Page 24**, invasive

activities will occupy less than 0.3 hectares over the project's lifespan, with rigorous mitigation to minimize impacts.

The DBAR was prepared with the understanding that the proposed prospecting activities are primarily non-invasive and represent an early investigative phase to assess feasibility. Mining feasibility cannot be determined until prospecting activities have been completed, as stated throughout the DBAR. Invasive activities, limited to a cumulative disturbance of less than 0.3 hectares, will only occur in the later stages of the prospecting phase and will involve minimal disturbance.

The DBAR commits to conducting specialist studies once the drilling plan is finalised, ensuring that sensitive areas are excluded from the prospecting footprint. Each drill site will occupy approximately 10m x 10m, with a maximum of four sites active at any time, resulting in a disturbance of less than 0.04 hectares at any given moment (refer to Page 24). Drill sites can also be adjusted to avoid sensitive areas, guided by walk-throughs conducted by qualified specialists.

The assertion by DAERL regarding the EAP's qualifications is unfounded, as the DBAR clearly states that all necessary specialist studies, compliant with regulations, will be conducted. The investigative nature of the prospecting right application does not guarantee mining activities, nor does it ensure a favourable feasibility outcome.

We thank you for taking part in the public participation process as well as your valuable contribution in providing comments. All comments provided will be incorporated into the Final Basic Assessment Report (FBAR) and submitted to the Department of Mineral Resources and Energy (DMRE), Northern Cape Province. DAERL will be informed of the DMRE's decision following the review period.

Dear Ms Smit

REGISTRATION AS AN INTERESTED AND AFFECTED PARTY AND LODGING OBJECTION TO THE APPLICATION OF SOLIUM ENERGY (PTY) LTD FOR THE PROPOSED PROSPECTING ACTIVITY ON FARMS 622 IN THE MAGISTERIAL DISTRICT OF NAMAQUALAND, NORTHERN CAPE PROVINCE

DMRE REFERENCE NUMBER: NC 30/5/1/1/2/14025 PR

1. WWF South Africa (WWF-SA) hereby wish to confirm its registration as an Interested and Affected Party (I&AP) in accordance with the Environmental Impact Assessment (EIA) Regulations¹ of the National Environment Management Act No. 107 of 1998 (NEMA) for the above-mentioned prospecting application for environmental authorization.
2. Please be advised that WWF-SA is the registered owner of Portion 1 of the Farm Ratel Kraal 131 located adjacent to the proposed prospecting area as indicated

¹ Government Notice No. R. 982 of 4 December 2014 (GNR 982), as amended.

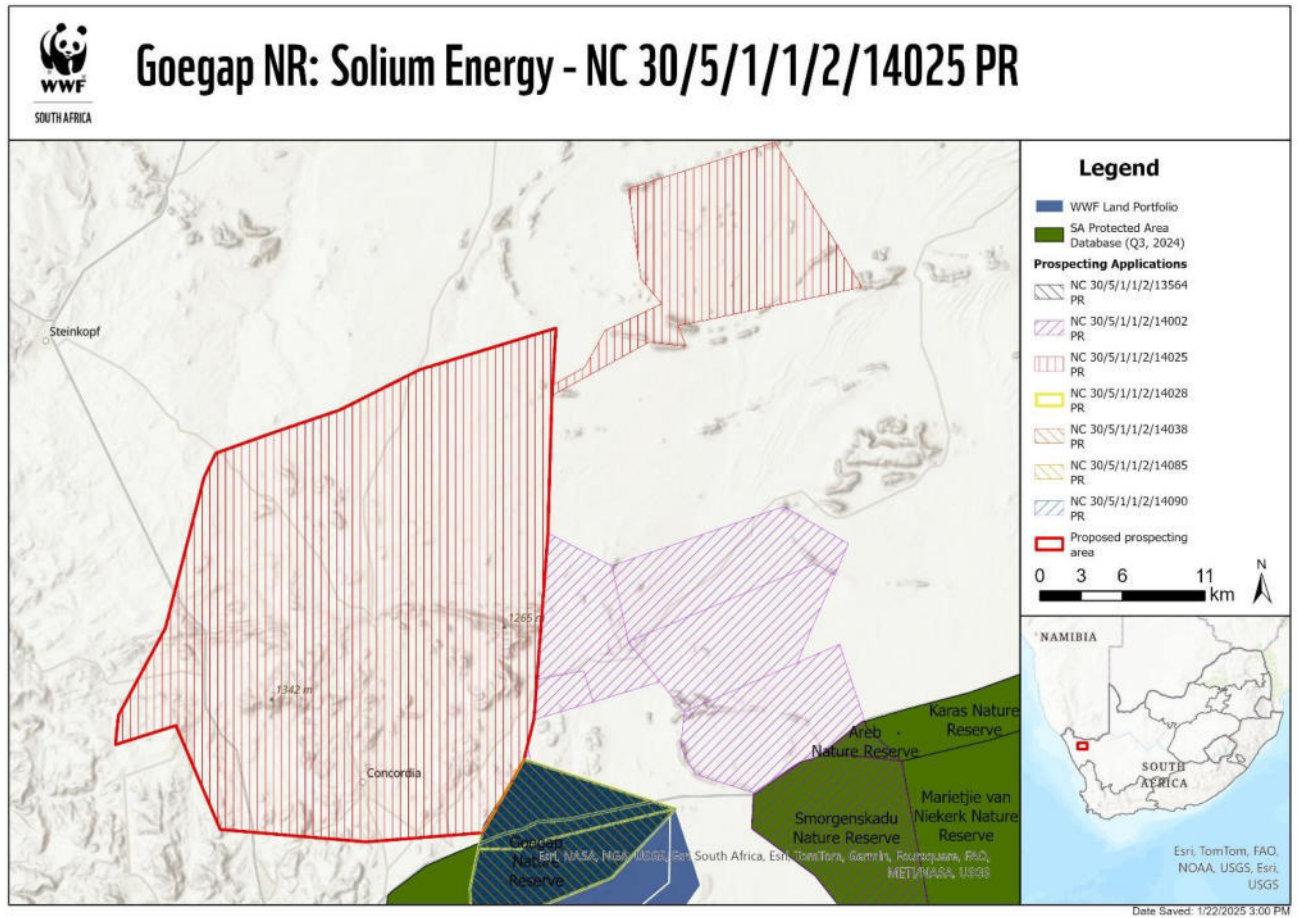

Figure 1.

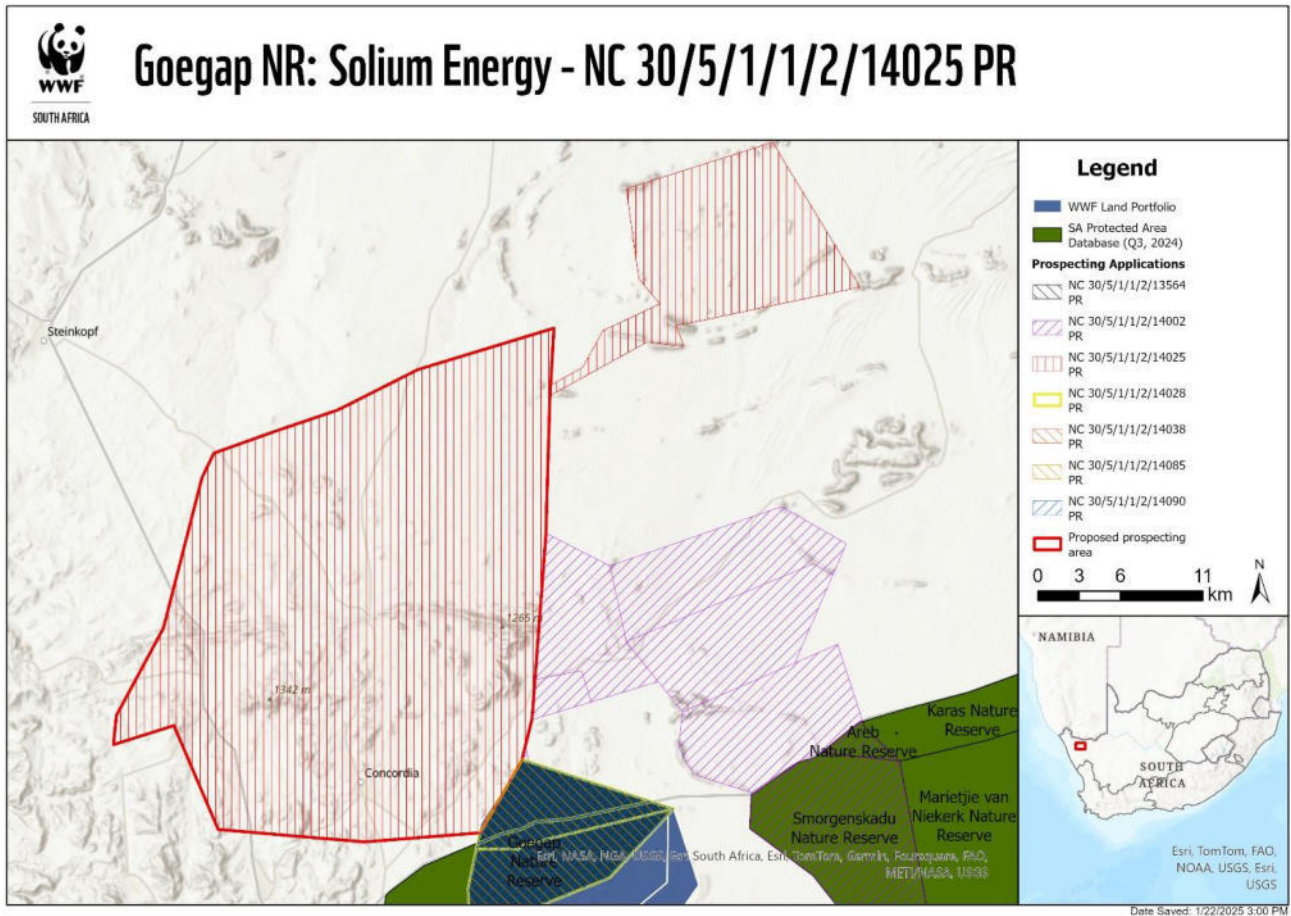

Figure 1: Location of WWF-SA properties in relation to the proposed prospecting area.

3. WWF-SA acquired several properties declared and managed as part of the Goegap Nature Reserve specifically for their ecological importance on request from the Northern Cape Department of Agriculture, Environmental Affairs, Rural Development and Land Reform (DAERL) to achieve national and international conservation targets in accordance with the objectives of the National Environmental Management: Protected Areas Act No. 57 of 2003 (NEM:PAA), as amended.
4. WWF-SA therefore has a clear interest in protecting sensitive ecosystems and threatened ecological areas on property it owns and adjacent properties from prospecting activities, as well as anticipated future impacts should the prospecting right be converted to a mining right.

BIODIVERSITY VALUE OF PROPOSED PROSPECTING AREA

5. The following environmental features are applicable to the proposed prospecting area as illustrated on the maps included in Annexure A:
 - a. Critical Biodiversity Areas (CBAs) and Ecological Support Areas (ESAs) in terms of the 2016 Northern Cape Critical Biodiversity Area Map

- b. National Freshwater Ecosystem Priority Area (NFEPA) rivers
- c. National Protected Areas Expansion Strategy Priority Areas (NPAES of 2016)

6. Approximately 75% (52 297 ha) of the proposed prospecting area falls within the Priority Focus Area of the NPAES. These areas are considered irreplaceable sites for biodiversity conservation to meet conservation targets, and global or national biodiversity commitments.
7. In addition, approximately 72% of the proposed prospecting area is categorised as irreplaceable CBAs and 18% as highly important ESAs. These areas are essential to meet biodiversity targets for ecosystems, species and ecological processes, with CBAs considered as “no-go” areas for any development.

Table 1: Definition² and extent of CBAs and ESAs within the proposed prospecting area

Property Description	Landscape-level Purpose	Management Objective	Extent (ha)	% of Proposed Prospecting Area
Critical Biodiversity Areas (CBAs)	Together with protected areas, it ensures that a viable representative sample of all ecosystem types and species can persist.	Maintain in a natural or near-natural state, with no further loss of natural habitat. Degraded areas should be rehabilitated. Only low-impact, biodiversity-sensitive land uses are appropriate.	49,969	72%
Ecological Support Areas (ESAs)	Ensures the long-term ecological functioning of the landscape as a whole.	Maintain in a functional, near-natural state. Some habitat loss is acceptable, provided the underlying biodiversity objectives and ecological functioning are not compromised.	12,407	18%

8. The proposed application is made in respect of an area that constitutes important habitat for several species of conservation concern as highlighted in the environmental screening report (Appendix L of the BAR). According to SANBI’s red data list, two Endangered (EN), eight Vulnerable (VU), six Rare and 27 Unnamed sensitive species potentially occur within the proposed prospecting area.

Table 2: Number of species identified through the environmental screening report that are endangered, vulnerable, rare and/or unnamed species that are categorized as sensitive by SANBI.

Theme	Endangered	Vulnerable	Least Concern	Rare	Unnamed sensitive species
Animal	2	6	0	1	1
Plants	0	2	0	5	26
Total	2	8	0	6	27

² Definitions copied directly from SANBI’s *Technical guidelines for CBA Maps: Guidelines for developing a map of Critical Biodiversity Areas & Ecological Support Areas using systematic biodiversity planning* (2017).

9. Taking the above information into consideration, the irreplaceability and critical importance of the ecosystem found in this area in terms of South African law and biodiversity planning instruments (e.g. provincial and national protected area expansion strategies) is evident. For this reason, WWF-SA is of the view that, although prospecting may have relatively limited impacts on the affected area, it is certain that conversion of these rights to mining would have unacceptable consequences for biodiversity, ecological infrastructure and associated ecosystem services.

COMMENT ON BASIC ASSESSMENT REPORT IN TERMS OF PROCEDURAL REQUIREMENTS OF THE EIA REGULATIONS (GNR 982)

10. In terms of sub-regulation 16(1)(b)(iii) and (iv) of the EIA Regulations (GNR 982), the Environmental Assessment Practitioner (EAP) is required to include in the application a signed declaration stating their independence and competence, as well as an undertaking under oath that the information presented is true and correct. Upon careful review of the Basic Assessment Report (BAR), these documents were found to be absent, and a copy is respectfully requested.
11. Sub-regulation 16(1)(b)(v) requires an environmental screening report to be generated through the national web based environmental screening tool. This report forms the basis of the environmental impact assessment process and is thus of critical importance in our consideration of the content of the BAR and proposed prospecting area.

A summary of the specialist assessments required in terms of the environmental screening report is provided in Table 30 of the BAR with a copy of the screening report made available in Appendix L (also see Table 3 below). According to the content of Table 30, specialist studies were not conducted "*due to the minimal and temporary nature of the proposed prospecting activities*" despite several of the themes being listed as having **High and Very High sensitivity scores** specifically linked to the anticipated prospecting activities. This reasoning does not align with the requirements of the relevant protocol as discussed in Point 12 below.

In addition, the available information does not demonstrate the EAP to possess the relevant experience or specialisations required for semi-arid, sensitive and biodiverse systems like the Succulent Karoo Biome, to be able to make this type of broad, unqualified statement. WWF-SA thus strongly object to the EAPs conclusion that specialist assessments are not required and respectfully request the site sensitivity verification report required in terms of the environmental themes protocol with a copy of the Department of Minerals and Energy's (DMRE) written approval thereof.

Table 3: Sensitivity scores as per the site screening report included in Appendix L of the BAR.

Theme	Very High sensitivity	High sensitivity	Medium sensitivity	Low sensitivity
Agriculture Theme		X		
Animal Species Theme		X		
Aquatic Biodiversity Theme	X			
Archaeological and Cultural Heritage Theme	X			
Civil Aviation Theme				X

Paleontology Theme			X	
Plant Species Theme	X			
Terrestrial Biodiversity Theme	X			

12. According to sub-regulation 16(3)(a), “any report, plan or document submitted as part of an application must comply with any protocol or minimum information requirements related to the application as identified and gazetted by the Minister in a government notice.” Upon review of the BAR, it was determined that the report fails to consider and apply the requirements of the prescribed protocols for the assessment and reporting on identified environmental themes (Government Gazette No. 320 of 20 March 2020) as required in terms of sections 24(5)(a), (h) and 44 of NEMA.

More specifically, the protocol requires that a site sensitivity verification report must be compiled through “(a) a desk top analysis, using satellite imagery; (b) a preliminary on-site inspection; and (c) any other available and relevant information” to confirm or dispute the current land use and/or environmental sensitive features identified in the environmental screening report to confirm if the identified specialist assessments are required. The protocols further require that should the site verification assessment determine that a designation of “very high” sensitivity should in fact be of “low” sensitivity, a compliance statement must be prepared by a specialist registered with SACNASP in the relevant field for submission as part of the application process. However, the BAR does not:

- a. include a copy of the site sensitivity verification report;
- b. provide a detailed, thought-through motivation for not undertaking the requisite specialist assessments;
- c. provide compliance statements from SACNASP registered specialists in terms of the themes indicated in Table 4 as being of high sensitivity; and/or
- d. provide written confirmation from DMRE regarding the acceptance of a site sensitivity verification report and compliance statements, should these exist.

Considering the above, we respectfully request copies of:

1. site sensitivity verification report;
2. compliance statements from suitable qualified specialists for all themes designated very high sensitivity; and
3. written confirmation from DMRE regarding the acceptance of the site sensitivity report and compliance statements to provide informed feedback on the application.

As it stands, the BAR appears to be fatally flawed through the lack of evidence that confirms compliance with these requirements.

13. Appendix 1: Paragraph 3(1)(e) of the EIA Regulations (hereafter referred to as Appendix 1) further requires a description of the policy and legislative context within which the application is proposed to be included in the BAR. However, Table 4 of the BAR fails to consider the following legislation, protocols and strategies applicable to the proposed mining activities and is thus non-compliant with the requirements of section 3(e) of Appendix 1:
 - a. Northern Cape Planning and Development Act No 7 of 1998
 - b. Northern Cape Nature Conservation Act No 9 of 2009
 - c. The prescribed protocols in terms of the EIA Regulations for the assessment and reporting on identified environmental themes (Government Gazette No. 320 of 20 March 2020)

14. Further to the above, even though the BAR refers to the Nama Khoi Municipality's Integrated Development Plan, it does not describe the zoning of the property and instead goes into detail about the Gamsberg zinc mine located in the Khai-Ma municipal area. It is unclear how this information is relevant to the prospecting application. It is requested that the EAP confirm the municipal zoning of the property and compliance with the relevant zoning bylaws of the Nama Khoi municipality (and not the Khai-Ma municipality).

15. Paragraph 3(1)(f) of Appendix 1 requires the inclusion of a motivation for the need and desirability of the proposed application in the context of the preferred location. However, the relevant motivation in the BAR fails to consider the sensitivity of the site as highlighted in terms of the NPAES, 2016 Northern Cape CBA map and environmental screening report results (considering there are no specialist assessments, site verification report or compliance statements) and subsequently does not explain how the proposed prospecting application and potential future mining activities prevails over national and international biodiversity commitments, as well as requirements of national legislation in terms of the:
 - a. Montreal Global Biodiversity Framework;
 - b. Convention on Biological Diversity;
 - c. National Environmental Management: Biodiversity Act No 10 of 2004 (NEM:BA);
and
 - d. NEM:PAA

16. Paragraph 3(1)(f) of Appendix 1 requires "*...an assessment of each identified potential significant impact and risk...*" to be included in the BAR. Due to the following omissions, we are concerned that the impact assessment included in the BAR cannot meet this requirement:
 - a. Site sensitivity verification report in terms of the minimum requirements for the assessment of environmental themes (see Point 12).

- b. Compliance statements from suitably qualified specialists to confirm the reduced sensitivity ratings from “very high” to “low” for the relevant environmental themes indicated in Table 4.

OTHER CONSIDERATIONS

17. The property description provided in the BAR and DMRE acceptance letter (Appendix H of the BAR) indicates the proposed prospecting area to be located on Farm 622. However, according to Windeed (Annexure B), the correct property description is Portion 25 of the Farm Steinkopf No 22. We would therefore appreciate clarification of this discrepancy.
18. It needs to be pointed out that the important biodiversity areas indicated in the Mining and Biodiversity Map referred to on pages 69 and 83 of the BAR was published in 2012 and is therefore outdated. The 2016 NC CBA Map provides a more accurate reflection of the distribution of CBAs and ESAs for consideration in the BAR.
19. It is incorrectly stated on pages 8 and 87 of the BAR that the screening tool designated the site to be of “medium” sensitivity in terms of the animal species theme. The correct designation is “high” due to the potential occurrence of several species of conservation concern (see Table 2).
20. The BAR mentions on several occasions that specialists will be involved during later phases to micro-site drilling and borehole sites to avoid sensitive environmental features. This step is however not included in the schedule provided on page 32 of the BAR. Please clarify the reason for this omission.
21. On pages 52 and 53 of the BAR it is stated that the 30 day comment period will be ending on 30 January 2025. However, on page 6 it is indicated as ending on 31 January 2025.
22. Page 77 of the BAR refers to the Namaqualand biome. This is incorrect as the property falls within the Succulent Karoo Biome.
23. Annexure I includes information related to a prospecting application in the Western Cape Province and the CV of Ms Zoë Norval. Please clarify the applicability to these documents in terms of the Concordia prospecting application.

CONCLUSION

24. WWF-SA is not against development as long as it is planned and implemented in a sustainable manner that complies with South Africa’s legislative framework. We are however concerned that the EIA process implemented for the proposed prospecting area does not comply with the requirements of the EIA regulations and ignores legislated requirements in terms of the minimum criteria for reporting on environmental themes. This landscape is highly sensitive in terms of its biodiversity and is known to respond very slowly to rehabilitation efforts due to its arid nature.

25. For this reason, it is our opinion that the prospecting application DMRE REF: NC 30/5/1/1/2/14025 PR in its current form does not comply with the EIA Regulations and we object in the strongest possible way to its approval. Furthermore, WWF-SA reserves the right to provide further comment in terms of Chapter 6 of the EIA Regulations, should the application be revised to address these omissions.

Sincerely,

ANGUS BURNS

Dear Madams /Sirs

RE: ACKNOWLEDGMENT OF COMMENTS ON THE DRAFT BASIC ASSESSMENT REPORT FOR PROSPECTING ACTIVITY ON FARM 622 IN THE MAGISTERIAL DISTRICT OF NAMAQUALAND, NORTHERN CAPE PROVINCE (DMRE REF: NC 30/5/1/1/2/14025 PR).

We acknowledge receipt of your correspondence dated 29 January 2025, containing comments regarding the Draft Basic Assessment Report (BAR) for the proposed prospecting project. We greatly appreciate your participation in the Public Participation Process (PPP) and your detailed feedback.

Below, we address each point raised.

1 -2. Registration as an I&AP and Lodging of Objection

the goal isn't to live forever, it is to protect a planet that will

Greenmined Environmental (Pty) Ltd |Tel: 021 851 2673 | Fax: 086 546 0579
Office No 37, Baker Square Block 1, De Beers Avenue, Paardevlei, Somerset West, 7130
Postnet Suite 62, Private Bag X15, Somerset West, 7129
Directors: S Smit; C Weideman | Reg No: 2012/055565/07 | VAT No. 4040263032

WWF-SA wishes to confirm its registration as an Interested and Affected Party (I&AP) in accordance with the Environmental Impact Assessment (EIA) Regulations of NEMA and lodges an objection to the application.

- The registration of WWF-SA as an I&AP is acknowledged. All comments and objections will be considered and incorporated into the Final Basic Assessment Report (FBAR).

3 - 4. Ownership and Conservation Intentions

WWF-SA is the registered owner of Portion 1 of the Farm Ratel Kraal 131, located adjacent to the proposed prospecting area and has acquired land to achieve conservation targets under the National Environmental Management: Protected Areas Act, 2003 (NEM:PAA).

WWF-SA acquired several properties declared and managed as part of the Goegap Nature Reserve specifically for their ecological importance on request from the Northern Cape Department of Agriculture, Environmental Affairs, Rural Development and Land Reform (DAERL) to achieve national and international conservation targets in accordance with the objectives of the National Environmental Management: Protected Areas Act No. 57 of 2003 (NEM:PAA), as amended.

WWF-SA therefore has a clear interest in protecting sensitive ecosystems and threatened ecological areas on property it owns and adjacent properties from prospecting activities, as well as anticipated future impacts should the prospecting right be converted to a mining right.

- While WWF-SA's conservation initiatives and ownership of Portion 1 of Farm Ratel Kraal 131 are acknowledged, it is important to note that the proposed prospecting activities are not within the Goegap Nature Reserve and will not impact formally declared protected areas. Additionally, prospecting does not equate to mining, and the precautionary principle applies in allowing a phased approach to environmental assessments.
- Greenmined acknowledges that portions of the prospecting area overlap with CBAs and NPAES Priority Focus Areas. However, as outlined on page 86 of the DBAR, the prospecting activities will avoid sensitive ecological features. Each drill site will be limited to a 10m x 10m footprint, and no more than four sites (0.04 hectares combined) will be active at any time. Additionally, specialists will conduct pre-activity walk-throughs to ensure sensitive areas are identified and avoided.
- It is important to emphasize that this application is for prospecting, not mining. Should future activities necessitate further environmental assessments, these will be undertaken in accordance with legal requirements.

5 - 9. Biodiversity Value of Proposed Prospecting Area

The site includes Critical Biodiversity Areas (CBAs), Ecological Support Areas (ESAs), and National Freshwater Ecosystem Priority Areas (NFEPA), making it irreplaceable for biodiversity conservation.

Taking the above information into consideration, the irreplaceability and critical importance of the ecosystem found in this area in terms of South African law and biodiversity planning instruments (e.g. provincial and national protected area expansion strategies) is evident. For this reason, WWF-SA is of the view that, although prospecting may have relatively limited impacts on the affected area, it is certain that conversion of these rights to mining would have unacceptable consequences for biodiversity, ecological infrastructure and associated ecosystem services.

- The DBAR acknowledges the ecological sensitivity of the area and outlines mitigation measures to minimize impacts. It should also be noted that the prospecting activities will be non-invasive for the initial phases, with invasive drilling limited to small areas. The site sensitivity verification report confirms that drilling locations will avoid high-sensitivity areas and that they will be regarded as no go areas.
- The DBAR provides a reasoned justification for the exclusion of specialist studies. As stated on page 47, the limited scale and temporary nature of the proposed activities do not warrant extensive specialist studies. The Environmental Assessment Practitioner (EAP) has outlined a mitigation hierarchy to address potential impacts. Site sensitivity verification will be conducted prior to invasive activities, as stipulated in the DBAR.
- Additionally, the DBAR complies with the National Environmental Management Act's requirements for prospecting applications. Should the prospecting phase yield results warranting mining, a new application with appropriate specialist studies will be submitted.

10 - 12. Compliance with EIA Regulations (GNR 982)

The DBAR lacks an EAP declaration of independence, a site sensitivity verification report, and compliance statements from specialists.

Sub-regulation 16(1)(b)(v) requires an environmental screening report to be generated through the national web based environmental screening tool. This report forms the basis of the environmental impact assessment process and is thus of critical importance in our consideration of the content of the BAR and proposed prospecting area.

A summary of the specialist assessments required in terms of the environmental screening report is provided in Table 30 of the BAR with a copy of the screening report made available in Appendix L (also see Table 3 below). According to the content of Table 30, specialist studies were not conducted "due to the minimal and temporary nature of the proposed prospecting activities" despite several of the themes being listed as having High and Very High sensitivity scores specifically linked to the anticipated prospecting activities. This reasoning does not align with the requirements of the relevant protocol as discussed in Point 12 below.

In addition, the available information does not demonstrate the EAP to possess the relevant experience or specialisations required for semi-arid, sensitive and biodiverse systems like the Succulent Karoo Biome, to be able to make this type of broad, unqualified statement. WWF-SA thus strongly object to the EAPs conclusion that specialist assessments are not required and respectfully request the site sensitivity verification report required in terms of the environmental themes protocol with a copy of the Department of Minerals and Energy's (DMRE) written approval thereof.

According to sub-regulation 16(3)(a), *"any report, plan or document submitted as part of an application must comply with any protocol or minimum information requirements related to the application as identified and gazetted by the Minister in a government notice."* Upon review of the BAR, it was determined that the report fails to consider and apply the requirements of the prescribed protocols for the assessment and reporting on identified environmental themes (Government Gazette No. 320 of 20 March 2020) as required in terms of sections 24(5)(a), (h) and 44 of NEMA. include a copy of the site sensitivity verification report;

provide a detailed, thought-through motivation for not undertaking the requisite specialist assessments;

provide compliance statements from SACNASP registered specialists in terms of the themes indicated in Table 4 as being of high sensitivity; and/or

provide written confirmation from DMRE regarding the acceptance of a site sensitivity verification report and compliance statements, should these exist.

More specifically, the protocol requires that a site sensitivity verification report must be compiled through *"(a) a desk top analysis, using satellite imagery; (b) a preliminary on-site inspection; and (c) any other available and relevant information"* to confirm or dispute the current land use and/or environmental sensitive features identified in the environmental screening report to confirm if the identified specialist assessments are required. The protocols further require that should the site verification assessment determine that a designation of "very high" sensitivity should in fact be of "low" sensitivity, a compliance statement must be prepared by a specialist registered with SACNASP in the relevant field for submission as part of the application process. However, the BAR does not:

a. include a copy of the site sensitivity verification report;

b. provide a detailed, thought-through motivation for not undertaking the requisite specialist assessments;

c. provide compliance statements from SACNASP registered specialists in terms of the themes indicated in Table 4 as being of high sensitivity; and/or

d. provide written confirmation from DMRE regarding the acceptance of a site sensitivity verification report and compliance statements, should these exist.

Considering the above, we respectfully request copies of:

1. site sensitivity verification report;
2. compliance statements from suitable qualified specialists for all themes designated very high sensitivity; and
3. written confirmation from DMRE regarding the acceptance of the site sensitivity report and compliance statements to provide informed feedback on the application.

As it stands, the BAR appears to be fatally flawed through the lack of evidence that confirms compliance with these requirements.

- The declaration of independence will be included in the FBAR (Appendix H). The site sensitivity verification was conducted in accordance with the relevant protocols, and additional specialist inputs will be obtained if deemed necessary during the prospecting phase. The DMRE will review the sensitivity verification report before granting authorization.

13. Omission of Key Legislative References

The DBAR fails to reference the Northern Cape Nature Conservation Act, 2009, the Northern Cape Planning and Development Act, 1998, and the prescribed assessment protocols under Government Gazette No. 320 of 2020.

Appendix 1: Paragraph 3(1)(e) of the EIA Regulations (hereafter referred to as Appendix 1) further requires a description of the policy and legislative context within which the application is proposed to be included in the BAR. However, Table 4 of the BAR fails to consider the following legislation, protocols and strategies applicable to the proposed mining activities and is thus non-compliant with the requirements of section 3(e) of Appendix 1: Northern Cape Planning and Development Act No 7 of 1998

Northern Cape Nature Conservation Act No 9 of 2009

The prescribed protocols in terms of the EIA Regulations for the assessment and reporting on identified environmental themes (Government Gazette No. 320 of 20 March 2020)

- The legislative framework provided in the DBAR aligns with NEMA and MPRDA requirements. However, the additional references will be included in the FBAR to ensure completeness.

14. Zoning and Municipal Compliance

Further to the above, even though the BAR refers to the Nama Khoi Municipality's Integrated Development Plan, it does not describe the zoning of the property and instead goes into detail about the Gamsberg zinc mine located in the Khai-Ma municipal area. It is unclear how this information is relevant to the prospecting application. It is requested that the EAP confirm the municipal zoning of the property and compliance with the relevant zoning bylaws of the Nama Khoi municipality (and not the Khai-Ma municipality).

- The FBAR will include confirmation of the zoning of the property within the Nama Khoi Municipality. Preliminary investigations indicate that the proposed activities align with existing land-use frameworks. This will be further detailed in the updated report.

15. Need and Desirability Justification

Paragraph 3(1)(f) of Appendix 1 requires the inclusion of a motivation for the need and desirability of the proposed application in the context of the preferred location. However, the relevant motivation in the BAR fails to consider the sensitivity of the site as highlighted in terms of the NPAES, 2016 Northern Cape CBA map and environmental screening report results (considering there are no specialist assessments, site verification report or compliance statements) and subsequently does not explain how the proposed prospecting application and potential future mining activities prevails over national and international biodiversity commitments, as well as requirements of national legislation in terms of the: Montreal Global Biodiversity Framework;

Convention on Biological Diversity;

National Environmental Management: Biodiversity Act No 10 of 2004 (NEM:BA); and NEM:PAA.

- The prospecting application aligns with national policies on responsible mineral resource utilisation. The impact is temporary and will be mitigated through rehabilitation measures. The DBAR will expand on sustainable development principles in the need and desirability section.

16. Impact Assessments and Mitigation Measures

The impact assessment lacks verification of reduced sensitivity ratings and does not demonstrate avoidance of significant environmental risks.

Paragraph 3(1)(f) of Appendix 1 requires "...an assessment of each identified potential significant impact and risk..." to be included in the BAR. Due to the following omissions, we are concerned that the impact assessment included in the BAR cannot meet this requirement: Site sensitivity verification report in terms of the minimum requirements for the assessment of environmental themes (see Point 12).

Paragraph 3(1)(f) of Appendix 1 requires "...an assessment of each identified potential significant impact and risk..." to be included in the BAR. Due to the following omissions, we are concerned that the impact assessment included in the BAR cannot meet this requirement: Site sensitivity verification report in terms of the minimum requirements for the assessment of environmental themes (see Point 12).

Compliance statements from suitably qualified specialists to confirm the reduced sensitivity ratings from "very high" to "low" for the relevant environmental themes indicated in Table 4.

- The DBAR follows prescribed methodologies for assessing impact significance. If DMRE requires further assessments, these will be undertaken as part of the authorisation process.

17. Property Description Discrepancies

The property description in the DBAR and DMRE acceptance letter refers to "Farm 622," whereas Windeed lists it as "Portion 25 of Farm Steinkopf No. 22."

- The property description will be clarified with the DMRE.

18. Use of Outdated Data Sources

The DBAR references a 2012 Mining and Biodiversity Map instead of the 2016 Northern Cape CBA Map.

- The DBAR includes both sources. The please refer to page 102 for the 2016 map in the FBAR.

19. Animal Species Sensitivity Rating

The DBAR incorrectly states that the screening tool designates the site as "medium" sensitivity for animal species when it is actually "high."

- Greenmined Environmental has reviewed this comment and agrees that the sensitivity of the animal species theme should be corrected. This amendment will be made in the FBAR. However, as outlined on page 87 of the DBAR, all drilling activities will be planned to avoid sensitive habitats, and mitigation measures will be implemented to minimize potential impacts.

20. Future Specialist Involvement

The BAR mentions on several occasions that specialists will be involved during later phases to micro-site drilling and borehole sites to avoid sensitive environmental features. This step is however not included in the schedule provided on page 32 of the BAR. Please clarify the reason for this omission.

- Micro-siting procedures are outlined in the DBAR's mitigation measures (page 86). Prior to any drilling, specialists will conduct walk-throughs to ensure sensitive areas are avoided. The schedule in the FBAR will be updated to explicitly reflect this process.
- The schedule will be updated to reflect this commitment.

21. Public Participation Period Discrepancy

On pages 52 and 53 of the BAR it is stated that the 30 day comment period will be ending on 30 January 2025. However, on page 6 it is indicated as ending on 31 January 2025.

- This will be corrected to the official closing date in the Final Basic Assessment Report (FBAR). However, comments received on the 31st of January 2025 will still be accepted.

22. Incorrect Biome Classification

Page 77 of the BAR refers to the Namaqualand biome. This is incorrect as the property falls within the Succulent Karoo Biome.

- This will be updated in the FBAR.

23. Irrelevant Annexures

Annexure I includes details of a Western Cape prospecting application and the CV of Ms. Zoë Norval, which do not pertain to this application.

- The relevant sections of Annexure I will be revised to remove unrelated information.
- This error occurred during document compilation. The FBAR will exclude irrelevant references and ensure all appended documents pertain specifically to the Concordia prospecting application.

24 – 25. Conclusion

WWF-SA is not against development as long as it is planned and implemented in a sustainable manner that complies with South Africa's legislative framework. We are however concerned that the EIA process implemented for the proposed prospecting area does not comply with the requirements of the EIA regulations and ignores legislated requirements in terms of the minimum criteria for reporting on environmental themes. This landscape is highly sensitive in terms of its biodiversity and is known to respond very slowly to rehabilitation efforts due to its arid nature.

For this reason, it is our opinion that the prospecting application DMRE REF: NC 30/5/1/1/2/14025 PR in its current form does not comply with the EIA Regulations and we object in the strongest possible way to its approval. Furthermore, WWF-SA reserves the right to provide further comment in terms of Chapter 6 of the EIA Regulations, should the application be revised to address these omissions.

- While WWF-SA's concerns are noted, the DBAR follows legal requirements, and mitigation measures will be enhanced where necessary in the FBAR. The prospecting application remains compliant with NEMA and MPRDA regulations.
- It is important to reiterate to WWF-SA that the DBAR was written with the proposed prospecting activities in mind and that it was clearly stated throughout the document that non-invasive activities form a major part of the feasibility study. Being in such early stages of the project, the feasibility of mining activities cannot be determined at this stage prior to prospecting activities being conducted. Furthermore, it was also clearly stated that any invasive activities will only occur towards the end of the prospecting phase and will involve minimal disturbance. This minimal impact, combined with the planned mitigation measures, is the reason the EAP concluded that the environmental impact would be low.
- The DBAR also commits to conducting specialist studies once the drilling plan is finalized, ensuring sensitive areas are excluded from the prospecting footprint. Each drill site will involve Reverse Circulation (RC) and Diamond (Core) drilling methods, occupying an area of approximately 10m x 10m. A maximum of four sites will be active at any given time, resulting in a total disturbance of less than 0.04 hectares at any one time. Over the life of the prospecting right, between 10 and 30 boreholes will be drilled, with a cumulative disturbance of less than 0.3 hectares.
- Given the minimal disturbance, drill sites can be adjusted to avoid potential impacts on sensitive areas. Before any invasive activities commence, a walk-through will be conducted by specialists, to identify and designate sensitive areas as no-go zones. The project layout will be refined based on findings once the final layout becomes available, and prospecting sites will be moved as necessary to accommodate sensitivity and accessibility considerations.
- The statement by WWF-SA that the BAR appears to be fatally flawed due to a lack of evidence confirming compliance with these requirements is therefore unfounded, as it was clearly stated that these studies, complying with all regulations, will be conducted to exclude sensitive areas. Regarding WWF-SA's position that development should be planned and implemented sustainably and in compliance with South Africa's legislative framework, it is critical to note that the application for a prospecting right is an investigative phase. It does not guarantee that mining activities will follow, nor does it imply any assurance of a positive outcome for mining feasibility. Greenmined Environmental remains committed to ensuring full compliance with regulatory requirements and sustainable environmental practices throughout the prospecting phase.

We thank you for taking part in the public participation process as well as your valuable contribution in providing comments. All comments provided will be incorporated into the Final Basic Assessment Report (FBAR) and submitted to the Department of Mineral Resources and Energy (DMRE), Northern Cape Province. WWF will be informed of the DMRE's decision following the review period.

Greenmined Environmental (Pty) Ltd remains committed to ensuring a thorough, transparent, and legally sound process. Further comments are welcomed before final submission to DMRE.

Kind Regards,

Sonette Smit

Dear Ms. Magerman,

Thank you for your response and for keeping us informed. We understand that scheduling a meeting this week may be challenging due to members' availability and connectivity issues.

As a reminder, the public commenting period for the Draft Basic Assessment Report (DBAR) and Environmental Management Programme (EMPR) was from 6 December 2024 until 30 January 2025.

Given the circumstances, we propose including in our Final Basic Assessment Report to the Department of Mineral Resources and Energy (DMRE) that prior to any prospecting activities, a meeting should be held between the applicant and community members to address any concerns they may have. Would this be in order with you?

As outlined in the DBAR, the initial prospecting activities consist mainly of non-invasive studies before any intrusive work begins. This means there will still be an opportunity for further discussions before any significant physical activities take place.

Please let us know your thoughts on this approach. We remain available to engage further at a time that suits you.

Kind Regards/Vriendelike Groete

Good day Ms.

Firstly, we would like to thank you for understanding our dilemma at this point in time. The fact of further communication is welcomed and we would surely take that opportunity.

As for community participation we will offer our support in that matter.

Hope you will contact us in due time as to your process flows.

Thank you.

Regards

Janice Magerman
